## SIMPLIFYING WATER QUALITY DATA MANAGEMENT WITH LAB RESULTS

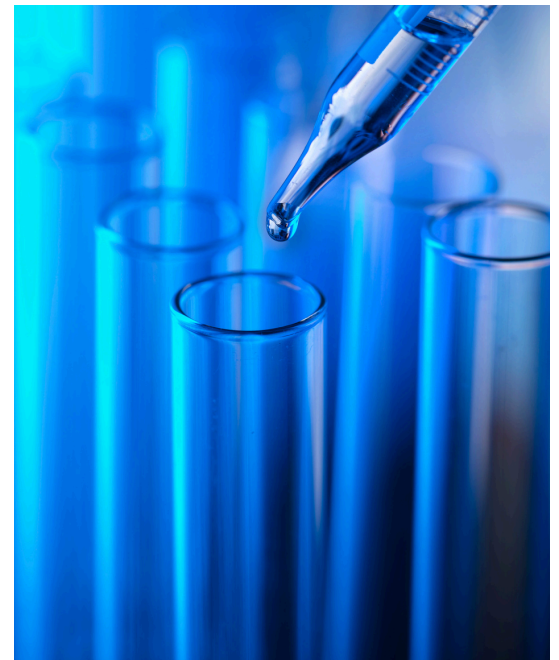

Water districts rely on Pace for accurate laboratory analysis. AquaSafe helps streamline how laboratory results are organized, monitored, and managed within a centralized platform.

When a participating water district requests it, Pace provides the laboratory results file to AquaSafe for import into the AquaSafe platform, making critical information immediately available in the platform.

With laboratory results centralized in AquaSafe, districts can:

- Gain a clear, centralized view of all your sampling data
- Reduce the risk of missed samples
- Track contaminant trends over time
- Receive notifications for exceedances and upcoming sampling requirements
- Spend less time managing spreadsheets and more time managing their water system

If your district currently uses Pace and would like to learn how laboratory data can flow directly into AquaSafe, we'd be happy to show you how the process works.

## CEU TRACKING FOR WATER PROFESSIONALS

AquaSafe is excited to introduce a new Continuing Education Unit (CEU) Tracking feature designed to help water districts stay on top of operator certification requirements. The new feature provides a centralized location to record completed training, monitor earned CEUs, and track progress toward renewal requirements.

By giving operators and district administrators greater visibility into certification status, AquaSafe helps reduce the risk of missed deadlines while making it easier to maintain compliance and prepare for audits. It's another step toward simplifying the day-to-day responsibilities of managing a modern water utility.
